

NEW CAN DESIGN

SPRAYMAX INFORMATION: NEW CAN DESIGN 2026

✓ UPDATED LABEL DESIGN

New look, same product you've trusted for years.
We have refreshed the appearance of our spray cans with a modern, contemporary label design.

To support international usability, the language order on the labels has been changed:

1. **English**, 2. German, 3. French

Additional languages will be added depending on the sales region (as before).

Please note: Only the label design has been updated — the contents, quality and formulation remain unchanged.

✓ CAP UPDATE FOR "1K" PRODUCTS

For our "1K" product line, we are replacing the standard cap with a smaller, newly developed "Minicap". This enables us to reduce plastic use by around 50% (compared to a conventional cap).

✓ PERFORATED „DONUT“

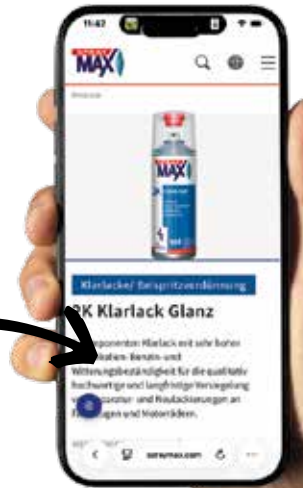

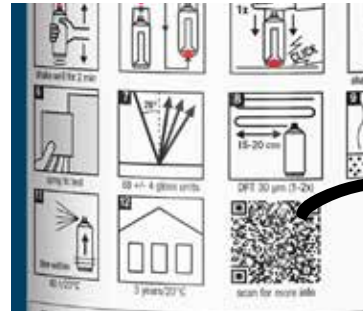

A new design of the "donut", which forms the base for the new Minicap, has been introduced. It includes a perforation to make it easier to remove it from the tinplate can, thereby improving recyclability.

SPRAYMAX INFORMATION: NEW CAN DESIGN 2026

✓ QR CODE ON THE CAN

A QR code on the back of the can provides direct access to product information on our website.

TRANSITION PHASE: OLD AND NEW DESIGNS IN CIRCULATION

Due to the long shelf life of our spray cans, we expect both the old and the new designs (labels, donuts and caps) to appear on the market during the transition phase.

Both versions are fully authentic and meet all quality standards.

WHAT DOES THIS MEAN FOR YOU?

No action required:

This transition will be completely smooth for distributors and customers.

Updated image material available soon:

We will provide all our distribution partners, importers, and customers with the updated product imagery (clipped product shots and application images) for all SprayMax products by early February 2026.

Original Products:

Whether you receive cans with the classic or new look, both are genuine products from our company.

Consistent Quality:

The product inside remains the same, regardless of the label or cap design.
