SPRAYMAX 1K ZINC WELD THRU PRIMER

PRIMER MADE FOR PROFESSIONALS

VARIATOR
NOZZLE

1K Zinc Weld Thru Primer is particularly suitable as a corrosion protection for water and weather-resistant vulnerable constructions, for repairing damaged zinc surfaces and for coating inner panel edges during spot welding. The product can be used on heating systems, pipelines, steel structures, radiators, railings, crash barriers, etc.

ADVANTAGES

- Corrosion protection for water and weather-prone structures
- For repairing damaged zinc surfaces
- For coating inner sheet metal edges spot welding
- Applicable for heating systems, pipelines, Steel super-structures, radiators, railings, crash barriers etc.
- Provides superior corrosion protection between welded substrates while minimizing heat affected zones and welding spatter
- Compatible with MIG/TIG Welding
- Fast drying, very productive
- Good chemical resistance

PRODUCT INFORMATION

Part-No.: 3680 251

Color: silver gray

Size: 500 ml
